## **PREAMBLE**

In pursuit of the Higher Education Department Policy Note 2022-23 Demand 20, Section 1.4, Tamil Nādu State Council for Higher Education took initiative to revamp the curriculum. On 27 July 2022, a meeting was convened by the Member-Secretary Dr. S. Krishnasamy enlightening the need of the hour to restructure the curriculum of both Under-graduate and Post-graduate programmes based on the speeches at the Tamil Nādu Legislative Assembly Budget meeting by the Honourable Higher Education Minister Dr K. Ponmudy and Honourable Finance Minister Dr. P. Thiagarajan. At present there are three different modes of imparting education in most of the educational institutions throughout the globe. Outcome Based Education, Problem Based Education, and Project Based Education.

Now our Honourable Higher Education Minister announced Industry Aligned Education. During discussion, the Member Secretary announced the importance of question papers and evaluation as envisaged by the Honourable Chief Secretary to Government Dr, V. Irai Anbu. This is very well embedded in Revised Bloom's Taxonomy.

Taxonomy forms three learning domains: the cognitive (knowledge), affective (attitude), and psychomotor (skill). This classification enables us to estimate the learning capabilities of students.

Briefly, it is aimed to restructure the curriculum as student-oriented, skill-based, and institution-industry-interaction curriculum with the various courses under "Outcome Based Education with Problem Based Courses, Project Based Courses, and Industry Aligned Programmes" having revised Bloom's Taxonomy for evaluating students skills.

Three domains:

(i) Cognitive Domain

(Lower levels: K1: Remembering ; K2: Understanding ; K3: Applying;

Higher levels: K4: Analysing ; K5: Evaluating; K6: Creating)

(ii) Affective Domain

(iii) Psychomotor Domain

**TANSICHE REGULATIONS ON LEARNING OUTCOMES-BASED CURRICULUM  
FRAMEWORK FOR POSTGRADUATE EDUCATION**

**Programme : M.Sc. MATHEMATICS**

**Programme Code :**

**PROGRAMME OUTCOMES (POs)**

**PO1: Problem Solving Skill:** Apply knowledge of Management theories and Human Resource practices to solve business problems through research in Global context.

**PO2: Decision Making Skill:** Foster analytical and critical thinking abilities for data-based decision-making.

**PO3: Ethical Value:** Ability to incorporate quality, ethical and legal value-based perspectives to all organizational activities.

**PO4: Communication Skill:** Ability to develop communication, managerial and interpersonal skills.

**PO5: Individual and Team Leadership Skill:** Capability to lead themselves and the team to achieve organizational goals.

**PO6: Employability Skill:** Inculcate contemporary business practices to enhance employability skills in the competitive environment.

**PO7: Entrepreneurial Skill:** Equip with skills and competencies to become an entrepreneur.

**PO8: Contribution to Society:** Succeed in career endeavours and contribute significantly to society.

**PO9: Multicultural competence:** Possess knowledge of the values and beliefs of multiple cultures and a global perspective.

**PO10: Moral and ethical awareness/reasoning:** Ability to embrace moral/ethical values in conducting one's life.

**PROGRAMME SPECIFIC OUTCOMES(PSOs)**

**PSO1: Placement:** To prepare the students who will demonstrate respectful engagement with others' ideas, behaviors, beliefs and apply diverse frames of reference to decisions and actions.

**PSO2: Entrepreneur:** To create effective entrepreneurs by enhancing their critical thinking, problem solving, decision making and leadership skills that will facilitate startups and high potential organizations.

**PSO3: Research and Development:** Design and implement HR systems and practices grounded in research that comply with employment laws, leading the organization towards

growth and development.

---

**PSO4: Contribution to Business World:** To produce employability, ethical and innovative professionals to sustain in the dynamic business world.

**PSO5: Contribution to the Society:** To contribute to the development of the society by collaborating with stakeholders for mutual benefits.

---

## **LEARNING AND TEACHING ACTIVITIES**

### **Work Load**

The information below is provided as a guide to assist students in engaging appropriately with the course requirements.

<b>Activity</b>	<b>Quantity</b>	<b>Workload periods</b>
Lectures	60	60
Tutorials	15	15
Assignments	5	5
Cycle Test or similar	2	4
Model Test or similar	1	3
University Exam Preparation	1	3
Total		90 periods

1. Tutorial Activities
2. Laboratory Activities
3. Field Study Activities
4. Assessment Activities

## **ASSESSMENT PRINCIPLES**

Assessment for this course is based on the following principles

1. Assessment must encourage and reinforce learning.
2. Assessment must measure achievement of the stated learning objectives.
3. Assessment must enable robust and fair judgments about student performance.
4. Assessment practice must be fair and equitable to students and give them the opportunity to demonstrate what they learned.
5. Assessment must maintain academic standards.

## **ASSESSMENT DETAILS**

<b>Assessment Item</b>	<b>Distributed Due Date</b>	<b>Weightage</b>	<b>Cumulative Weightage</b>
Assignment 1	3 <sup>rd</sup> week	2%	2%
Assignment 2	6 <sup>th</sup> Week	2%	4%
Cycle Test – I	7 <sup>th</sup> Week	6%	10%
Assignment 3	8 <sup>th</sup> Week	2%	12%
Assignment 4	11 <sup>th</sup> Week	2%	14%
Cycle Test – II	12 <sup>th</sup> Week	6%	20%
Assignment 5	14 <sup>th</sup> Week	2%	22%
Model Exam	15 <sup>th</sup> Week	13%	35%
Attendance	All weeks as per the Academic Calendar	5%	40%
University Exam	17 <sup>th</sup> Week	60%	100%

## **TEACHING METHODOLOGIES**

**Traditional Teaching methods** like Chalk and Board, Virtual Classroom, LCD projector, Smart Class, Video Conference, Guest Lectures.

**Asking students to formulate a problem from a topic covered in a week's time**

Assignment, Class Test, Slip test

**Asking students to use state-of-the-art technologies/software to solve problems**

Applications, Use of Mathematical software

**Introducing students to applications before teaching the theory**

**Training students to engage in self-study without relying on faculty (for example – library and internet search, manual and handbook usage, etc.)**

Library, Net Surfing, Manuals, NPTEL Course Materials published in the website

Other university websites.

## **FACULTY COURSE FILE STRUCTURE**

### ***CONTENTS***

- a.** Academic Schedule
- b.** Students Name List
- c.** Time Table
- d.** Syllabus
- e.** Lesson Plan
- f.** Staff Workload
- g.** Course Design(content, Course Outcomes(COs), Delivery method, mapping of COs with Programme Outcomes(POs), Assessment Pattern in terms of Revised Bloom's Taxonomy)
- h.** Sample CO Assessment Tools.
- i.** Faculty Course Assessment Report(FCAR)
- j.** Course Evaluation Sheet
- k.** Teaching Materials(PPT, OHP etc)
- l.** Lecture Notes
- m.** Home Assignment Questions
- n.** Tutorial Sheets
- o.** Remedial Class Record, if any.
- p.** Projects related to the Course
- q.** Laboratory Experiments related to the Courses
- r.** Internal Question Paper
- s.** External Question Paper
- t.** Sample Home Assignment Answer Sheets
- u.** Three best, three middle level and three average Answer sheets
- v.** Result Analysis (CO wise and whole class)
- w.** Question Bank for Higher studies Preparation (GATE/Placement)
- x.** List of mentees and their academic achievements

## M.Sc. MATHEMATICS PROGRAMME STRUCTURE

### First Year

	Semester-I	Credit	Hours per week
<b>Part – A</b>	1.1. <b>CC-I</b> : Algebraic Structures	5	6
	1.2. <b>CC-II</b> : Real Analysis - I	5	6
	1.3. <b>CC-III</b> : Ordinary Differential Equations	4	6
	1.4. <b>Elective - I</b> (Choose any one) 1.4.1. Graph Theory and Applications 1.4.2. Formal Languages and Automata Theory 1.4.3. Algebraic Number Theory	3	6
	1.5. <b>Elective - II</b> (Choose any one) 1.5.1. Number Theory and Cryptography 1.5.2. Analytic Number Theory 1.5.3. Fuzzy Sets and Their Applications	3	6
	<b>Total</b>	<b>20</b>	<b>30</b>

	Semester-II	Credit	Hours per week
<b>Part - A</b>	2.1. <b>CC-IV</b> : Advanced Algebra	5	6
	2.2. <b>CC-V</b> : Real Analysis - II	5	6
	2.3. <b>CC-VI</b> : Partial Differential Equations	4	6
	2.4. <b>Elective - III</b> (Choose any one) 2.4.1. Algebraic Topology 2.4.2. Mathematical Statistics 2.4.3. Tensor Analysis and Relativity	3	5
	2.5. <b>Elective-IV</b> (Choose any one) 2.5.1. Wavelets 2.5.2. Operations Research 2.5.3. Neural Networks	3	4
	<b>Part - B</b>	2.6. <b>Skill Enhancement Course - I</b> Mathematical Documentation using LaTeX.	2
	<b>Total</b>	<b>22</b>	<b>30</b>

**Second Year**

	<b>Semester-III</b>	<b>Credit</b>	<b>Hours per week</b>
<b>Part - A</b>	3.1. <b>CC-VII</b> : Complex Analysis	5	6
	3.2. <b>CC-VIII</b> : Probability Theory	4	5
	3.3. <b>CC-IX</b> : Topology	5	6
	3.4. <b>CC-X :Core Industry Module</b> Calculus of Variations and Integral Equations	4	5
	3.5. <b>Elective - V</b> (Choose any one) 3.5.1. Research Methodology 3.5.2. Mathematical Python Theory 3.5.3. Mechanics	4	5
<b>Part - B</b>	3.6. <b>Skill Enhancement Course - II</b> (Choose any one) 3.6.1. Mathematical Foundations of Artificial Intelligence 3.6.2. R- Programming 3.6.3. Programming in C++	2	3
	3.7. <b>Internship / Industrial Activity /Field visit/ Research Knowledge updation Activity / Literacy</b> Internship Report to be submitted to the Department (Carried out in minimum 20 hours)	2	<b>External Valuation required</b>
	<b>Total</b>	<b>26</b>	<b>30</b>

	<b>Semester-IV</b>	<b>Credit</b>	<b>Hours per week</b>
<b>Part - A</b>	4.1. <b>CC-XI</b> : Functional Analysis	5	6
	4.2. <b>CC-XII</b> : Differential Geometry	4	6
	4.3. Project with Viva Voce	7	9
	4.4. <b>Elective - VI</b> (Choose any one) 4.4.1. Ring Theory and Lattices 4.4.2. Mathematical Python - Practical 4.4.3. Stochastic Process	4	6
<b>Part - B</b>	4.5. <b>Skill Enhancement Course - III</b> (Choose any one) 4.5.1. Introduction to Machine Learning and Applications 4.5.2. Financial Mathematics 4.5.3. Programming in C++ -Practical	2	3

<b>Part - C</b>	<b>4.6. Extension Activity /Pollution Awareness/Literacy / Voluntary Services</b> Report to be submitted to the Department	1	<b>External Valuation required</b>
	Total	<b>23</b>	<b>30</b>
	<b>TOTAL CREDITS</b>		<b>91</b>

### COMPONENT WISE CREDIT DISTRIBUTION

Credits	Sem I	Sem II	Sem III	Sem IV	Total
Core	14	14	19	9	56
Elective	6	6	3	4	19
Project				7	7
Soft Skill		2	2	2	6
Internship / Industrial training			2		2
Extension activity				1	1
<b>Total</b>	<b>20</b>	<b>22</b>	<b>26</b>	<b>23</b>	<b>91</b>

Part - A component Core Courses (CC) and Part - B (i) will be taken into account for CGPA calculation for the Postgraduate programme and the other components Part - B and Part - C have to be completed during the duration of the programme as per the norms, to be eligible for obtaining the PG degree

### CONSOLIDATED CREDITS DISTRIBUTION

Category of Courses	Credits for each Course	Number of Courses	Number of Credits in each Category	Total Credits	Total Credits for the Programme
Core		12	55	83	90 (CGPA)
Project with viva voce	7	1	7		
Elective	3	6	20		
Skill Enhancement Courses	2	3	6		
Internship	2	1	2		
Extension Activity	1	1	1	1	1 (Non CGPA)
<b>TOTAL</b>					<b>91</b>

**TEMPLATE FOR SEMESTER**

Semester	Category of Courses	Marks (Max 100)		Duration for UE	Credits
		CIA	UE		
<b>I</b>	1.1. Core - I	25	75	3 Hrs	5
	1.2. Core - II	25	75	3 Hrs	5
	1.3. Core - III	25	75	3 Hrs	4
	1.4. Elective - I	25	75	3 Hrs	3
	1.5. Elective - II	25	75	3 Hrs	3
<b>II</b>	2.1. Core - IV	25	75	3 Hrs	5
	2.2. Core - V	25	75	3 Hrs	5
	2.3. Core - VI	25	75	3 Hrs	4
	2.4. Elective - III	25	75	3 Hrs	3
	2.5. Elective - IV	25	75	3 Hrs	3
	2.6. Skill Enhancement course - I	25	75	3Hrs	2
<b>III</b>	3.1. Core - VII	25	75	3 Hrs	5
	3.2. Core - VIII	25	75	3 Hrs	4
	3.3. Core - IX	25	75	3 Hrs	5
	3.4. Core - X	25	75	3 Hrs	4
	3.5. Elective - V	25	75	3 Hrs	4
	3.6. Skill Enhancement course - II	25	75	3Hrs	2

	3.7.Internship/Industrial Activity/Field visit/ Research Knowledge updation activity / Literacy	50	50	External Evaluation required	2
<b>IV</b>	4.1. Core - XI	25	75	3 Hrs	5
	4.2. Core - XII	25	75	3 Hrs	4
	4.3. Project with Viva-Voce	25	75	3 Hrs	7
	4.4. Elective - VI	25	75	3 Hrs	4
	4.5.Skill Enhancement course - III	25	75	3Hrs	2
	4.6.Extension Activity/Pollution Awareness/Literacy/ Voluntary Services	50	50	External Evaluation required	1

#### **Institution-Industry-Interaction ( Industry aligned Courses)**

Programmes /course work/ field study/ Modelling the Industry Problem/ Statistical Analysis / Commerce-Industry related problems / MoU with Industry and the like activities.

### **TESTING PATTERN**

**(25+75)**

#### **Internal Assessment**

**Theory Course:** For theory courses there shall be three tests conducted by the faculty concerned and the average of the best two can be taken as the Continuous Internal Assessment (CIA) for a maximum of 25 marks. The duration of each test shall be one / one and a half hours.

**Computer Laboratory Courses:** For Computer Laboratory oriented Courses, there shall be two tests in Theory part and two tests in Laboratory part. Choose one best from the Theory part and the other best from the two Laboratory parts. The average of the best two can be treated as the CIA for a maximum of 25 marks. The duration of each test shall be one / one and a half hours.

There is no improvement for CIA in both theory and laboratory, and also for University End Semester Examination.

**Written Examination : Theory Paper** (Bloom's Taxonomy based)

**QUESTION PAPER MODEL**

<b>Intended Learning Skills</b>	<b>Maximum 75 Marks</b> Passing Minimum: 50% Duration : Three Hours
<b>Part –A (10x 2 = 20 Marks)</b>	
	Answer ALL questions <b>Each Question carries 2 mark</b>
Memory Recall / Example/ Counter Example / Knowledge about the Concepts/ Understanding	Two questions from each UNIT <b>Question 1 to Question 10</b>
<b>Part – B (5 x 5 = 25 Marks)</b>	
	Answer ALL questions <b>Each questions carries 5 Marks</b>
Descriptions/ Application (problems)	Either-or Type Both parts of each question from the same UNIT <b>Question 11(a) or 11(b) To Question 15(a) or 15(b)</b>
<b>Part-C (3x 10 = 30 Marks)</b>	
	Answer any THREE questions <b>Each question carries 10 Marks</b>
Analysis /Synthesis / Evaluation	There shall be FIVE questions covering all the five units <b>Question 16 to Question 20</b>

Each question should carry the course outcome and cognitive level

## SYLLABUS FOR DIFFERENT COURSES OF M.Sc. MATHEMATICS

### SEMESTER - I

Title of the Course		<b>1.1 ALGEBRAIC STRUCTURES</b>					
Paper Number		CORE - I					
Category	Core	Year	<b>I</b>	Credits	<b>5</b>	Course Code	
		Semester	<b>I</b>				
Instructional Hours per week		Lecture	Tutorial	Lab Practice	Total		
		4	2	-	<b>6</b>		
Prerequisite		UG level Modern Algebra					
Objectives of the Course		To introduce the concepts and to develop working knowledge on class equation, solvability of groups, finite abelian groups, linear transformations, real quadratic forms.					
Course Outline		<b>UNIT-I</b> : Counting Principle - Class equation for finite groups and its applications - Sylow's theorems (For theorem 2.12.1, First proof only). Chapter 2: Sections 2.11 and 2.12 (Omit Lemma 2.12.5)					
		<b>UNIT-II</b> : Solvable groups - Direct products - Finite abelian groups- Modules Chapter 5 : Section 5.7 (Lemma 5.7.1, Lemma 5.7.2, Theorem 5.7.1), Chapter 2: Section 2.13 and 2.14 (Theorem 2.14.1 only) Chapter 4: Section 4.5					
		<b>UNIT-III</b> : - Linear Transformations: Canonical forms –Triangular form - Nilpotent transformations. Chapter 6: Sections 6.4, 6.5					
		<b>UNIT-IV</b> : Jordan form - rational canonical form. Chapter 6 : Sections 6.6 and 6.7					
		<b>UNIT-V</b> : Trace and transpose - Hermitian, unitary, normal transformations, real quadratic form. Chapter 6 : Sections 6.8, 6.10 and 6.11 (Omit 6.9)					
Skills acquired from this course		Knowledge, Problem Solving, Analytical ability, Professional Competency, Professional Communication and Transferable Skill					
Recommended Text		I.N. Herstein. <i>Topics in Algebra</i> (II Edition) Wiley Eastern Limited, New Delhi, 1975.

### Course Learning Outcome (for Mapping with POs and PSOs)

Students will be able to

**CLO 1:** Recall basic counting principle, define class equations to solve problems, explain Sylow’s theorems and apply the theorem to find number of Sylow subgroups

**CLO 2:** Define Solvable groups, define direct products, examine the properties of finite abelian groups, define modules

**CLO 3:** Define similar Transformations, define invariant subspace, explore the properties of triangular matrix, to find the index of nilpotence to decompose a space into invariant subspaces, to find invariants of linear transformation, to explore the properties of nilpotent transformation relating nilpotence with invariants.

**CLO 4:** Define Jordan, canonical form, Jordan blocks, define rational canonical form, define companion matrix of polynomial, find the elementary devices of transformation, apply the concepts to find characteristic polynomial of linear transformation.

**CLO 5:** Define trace, define transpose of a matrix, explain the properties of trace and transpose, to find trace, to find transpose of matrix, to prove Jacobson lemma using the triangular form, define symmetric matrix, skew symmetric matrix, adjoint, to define Hermitian, unitary, normal transformations and to verify whether the transformation in Hermitian, unitary and normal

	POs						PSOs		
	1	2	3	4	5	6	1	2	3
CLO1	3	1	3	2	3	3	3	2	1
CLO2	2	1	3	1	3	3	3	2	1
CLO3	3	2	3	1	3	3	3	2	1
CLO4	1	2	3	2	3	3	3	2	1
CLO5	3	1	2	3	3	3	3	2	1

Title of the Course		<b>1.2 REAL ANALYSIS - I</b>					
Paper Number		CORE - II					
Category	Core	Year	<b>I</b>	Credits	<b>5</b>	Course Code	
		Semester	<b>I</b>				
Instructional Hours per week		Lecture	Tutorial	Lab Practice	Total		
		4	2	-	<b>6</b>		
Prerequisite		UG level Real Analysis concepts					
Objectives of the Course		To work comfortably with functions of bounded variation, Riemann-Stieltjes Integration, convergence of infinite series, infinite product and uniform convergence and its interplay between various limiting operations.					
Course Outline		<p><b>UNIT-I : Functions of bounded variation</b> - Introduction - Properties of monotonic functions - Functions of bounded variation - Total variation - Additive property of total variation - Total variation on <math>[a, x]</math> as a function of <math>x</math> - Functions of bounded variation expressed as the difference of two increasing functions - Continuous functions of bounded variation. Chapter – 6 : Sections 6.1 to 6.8</p> <p><b>Infinite Series</b> : Absolute and conditional convergence - Dirichlet's test and Abel's test - Rearrangement of series - Riemann's theorem on conditionally convergent series. Chapter 8 : Sections 8.8, 8.15, 8.17, 8.18</p>					
		<p><b>UNIT-II : The Riemann - Stieltjes Integral</b> - Introduction - Notation - The definition of the Riemann - Stieltjes integral - Linear Properties - Integration by parts- Change of variable in a Riemann - Stieltjes integral - Monotonically increasing integrators, Upper and lower integrals - Additive and linearity properties of upper, lower integrals - Riemann's condition - Comparison theorems. Chapter - 7 : Sections 7.1 to 7.6, 7.11- 7.14</p>					
		<p><b>UNIT-III : The Riemann-Stieltjes Integral</b> - Integrators of bounded variation-Sufficient conditions for the existence of Riemann-Stieltjes integrals-Necessary conditions for the existence of RS integrals- Mean value theorems -integrals as a function of the interval – Second fundamental theorem of integral calculus-Change of variable -Second Mean Value Theorem for Riemann integral- Riemann-Stieltjes integrals depending on a parameter. Chapter - 7 : Sections 7.15 to 7.23</p>					
		<p><b>UNIT-IV : Infinite Series and infinite Products</b> - Double sequences - Double series - Rearrangement theorem for double series - A sufficient condition for equality of iterated series - Multiplication of series – Cesaro summability - Infinite products. Chapter - 8 : Sections 8.20, 8.21 to 8.26</p> <p><b>Power series</b> - Multiplication of power series - The Taylor's series generated by a function - Bernstein's theorem Chapter 9 : Sections 9.14 9.15, 9.19, 9.20</p>					

	<b>UNIT-V: Sequences of Functions</b> – Pointwise convergence of sequences of functions - Examples of sequences of real - valued functions - Uniform convergence and continuity - Cauchy condition for uniform convergence - Uniform convergence of infinite series of functions - Riemann - Stieltjes integration – Non-uniform Convergence and Term-by-term Integration - Uniform convergence and differentiation - Sufficient condition for uniform convergence of a series - Mean convergence. Chapter - 9: Sections 9.1 to 9.6, 9.9, 9.10, 9.11.
Skills acquired from this course	Knowledge, Problem Solving, Analytical ability, Professional Competency, Professional Communication and Transferable Skill

### Course Learning Outcome (for Mapping with POs and PSOs)

Students will be able to

**CLO1:** Analyze and evaluate functions of bounded variation and Rectifiable Curves.

**CLO2:** Describe the concept of Riemann-Stieltjes integral and its properties.

**CLO3:** Demonstrate the concept of step function, upper function, Lebesgue function and their integrals.

**CLO4:** Construct various mathematical proofs using the properties of Lebesgue integrals and establish the Levi monotone convergence theorem.

**CLO5:** Formulate the concept and properties of inner products, norms and measurable functions.

	POs						PSOs		
	1	2	3	4	5	6	1	2	3
CLO1	3	1	3	2	3	3	3	2	1
CLO2	2	1	3	1	3	3	3	2	1
CLO3	3	2	3	1	3	3	3	2	1
CLO4	1	2	3	2	3	3	3	2	1
CLO5	3	1	2	3	3	3	3	2	1

Title of the Course		<b>1.3 ORDINARY DIFFERENTIAL EQUATIONS</b>					
Paper Number		CORE - III					
Category	Core	Year	<b>I</b>	Credits	<b>4</b>	Course Code	
		Semester	<b>I</b>				
Instructional Hours per week		Lecture	Tutorial	Lab Practice	Total		
		4	2	--	<b>6</b>		
Prerequisite		UG level Calculus and Differential Equations					
Objectives of the Course		To develop strong background on finding solutions to linear differential equations with constant and variable coefficients and also with singular points, to study existence and uniqueness of the solutions of first order differential equations					
Course Outline		<b>UNIT-I : Linear equations with constant coefficients:</b> Second order homogeneous equations-Initial value problems-Linear dependence and independence-Wronskian and a formula for Wronskian-Nonhomogeneous equation of order two. Chapter 2: Sections 1 to 6					
		<b>UNIT-II : Linear equations with constant coefficients:</b> Homogeneous and non-homogeneous equation of order n –Initial value problems- Annihilator method to solve non-homogeneous equation- Algebra of constant coefficient operators. Chapter 2 : Sections 7 to 12.					
		<b>UNIT-III : Linear equation with variable coefficients:</b> Initial value problems -Existence and uniqueness theorems – Solutions to solve a non-homogeneous equation – Wronskian and linear dependence – reduction of the order of a homogeneous equation – homogeneous equation with analytic coefficients-The Legendre equation. Chapter : 3 Sections 1 to 8 ( Omit section 9)					
		<b>UNIT-IV :Linear equation with regular singular points:</b> Euler equation – Second order equations with regular singular points – Exceptional cases – Bessel Function. Chapter 4 : Sections 1 to 4 and 6 to 8 (Omit sections 5 and 9)					
		<b>UNIT-V : Existence and uniqueness of solutions to first order equations:</b> Equation with variable separation – Exact equation – method of successive approximations – the Lipschitz condition – convergence of the successive approximations and the existence theorem. Chapter 5 : Sections 1 to 6 ( Omit Sections 7 to 9)					
Skills acquired from this course		Knowledge, Problem Solving, Analytical ability, Professional Competency, Professional Communication and Transferable Skill					
Recommended Text		E.A.Coddington, <i>A introduction to ordinary differential equations</i> (3 <sup>rd</sup> Printing) Prentice-Hall of India Ltd., New Delhi, 1987.

### Course Learning Outcome (for Mapping with POs and PSOs)

Students will be able to

**CLO1:** Establish the qualitative behaviour of solutions of systems of differential equations .

**CLO2:** Recognize the physical phenomena modelled by differential equations and dynamical systems.

**CLO3:** Analyze solutions using appropriate methods and give examples.

**CLO4:** Formulate Green 's function for boundary value problems.

**CLO5:** Understand and use various theoretical ideas and results that underlie the mathematics in this course.

Title of the Course		<b>1.4.1: GRAPH THEORY AND APPLICATIONS</b>					
Paper Number		ELECTIVE - I					
Category	Elective	Year	I	Credits	3	Course Code	
		Semester	I				
Instructional Hours per week	Lecture	Tutorial		Lab Practice		Total	
	4	2		--		6	
Prerequisite		Elementary Number Theory and basic Set Operations in Mathematics					

Objectives of the Course	To understand and apply the fundamental concepts in Graph Theory, to apply Graph Theory based tools in solving practical problems and to improve the proof writing skills.
Course Outline	<p><b>UNIT-I : Basic Result:</b> Subgraphs – Degrees of Vertices – Paths and Connectedness – Automorphism of a simple graph – Line graphs – Operations on graphs – Graph Products. Chapter 1: Sec 1.1 to 1.9.</p> <p><b>UNIT-II :Connectivity:</b> Vertex Cuts and Edge Cuts – Connectivity and Edge Connectivity – Blocks. Chapter 3: Sec 3.1 to 3.4.</p> <p><b>UNIT-III : Trees:</b> Definition, Characterization and simple properties - Centres and centroids - counting the number of Spanning Trees -Cayley’s formula Chapter 4: Sec 4.1 to 4.5.</p> <p><b>UNIT-IV : Independent Sets and Matchings:</b> Vertex – Independent Sets and Vertex Coverings – Edge Independent Sets – Matchings and Factors – Matching in Bi-partite Graphs – Perfect Matching and the Tutte Matrix Chapter 5: Sec 5.1 to 5.6.</p> <p><b>UNIT-V: Eulerian and Hamiltonian Graphs:</b> Eulerian Graphs-Hamiltonian Graphs-Hamilton’s “Around the World” Game <b>Graph Colorings:</b> Vertex colorings-Applications of Graph Colorings-Critical Graphs-Brooks’ Theorem. Chapter 6: Sec 6.1 to 6.3, Chapter 7: Sec 7.1 to 7.3 (up to Brooks theorem).</p>
Recommended Text	R.Balakrishnan and K.Ranganathan, <i>TextBook of Graph Theory</i> , Springer Publications, 2012.

Rosen, <i>Discrete Mathematics and Its Applications</i>, McGraw Hill, 2007</li> </ol>

### Course Learning Outcome (for Mapping with POs and PSOs)

Students will be able to

**CLO 1:** Demonstrate the concept of different structures and types about graphs and explain its applications.

**CLO 2:** Determine the properties of trees and applications in network and study the concepts of connections in graphs.

**CLO 3:** Acquire the knowledge about Euler Tours, Hamilton Cycles and matchings in Graphs.

**CLO 4:** Analyze the concept of edge colouring ,independent sets and cliques in Graphs

**CLO 5:** Explain the concept of vertex colorings.

Title of the Course		<b>1.4.2: FORMAL LANGUAGES AND AUTOMATA THEORY</b>							
Paper Number		ELECTIVE - I							
Category	Elective	Year	<b>I</b>	Credits	<b>3</b>	Course Code			
		Semester	<b>I</b>						
Instructional Hours per week		Lecture	Tutorial		Lab Practice	Total			
		4	2		--	<b>6</b>			
Pre-requisite		Elementary Algebra							
Objectives of the Course		To know about Finite state Automata and systems, study about regular sets and its properties, grammar and normal form, languages and pushdown automata and Context free languages.							
Course Outline		<b>UNIT-I</b> : Finite automata, regular expressions and regular grammars Finite state systems – Basic definitions – Nondeterministic finite automata – Finite automata with moves – Regular expressions – Regular grammars. Chapter 2. Sections 2.1 to2.5 Chapter 9 Section 9.1							
		<b>UNIT-II</b> : Properties of regular sets. The Pumping lemma for regular sets – Closure properties of regular sets – Decision algorithms for regular sets – The Myhill-Nerode Theorem and minimization of finite automata. Chapter 3 : Sections 3.1 to 3.4							
		<b>UNIT-III</b> : Context-free grammars Motivation and introduction – Context-free grammars – Derivation treesSimplification of context-free grammars – Chomsky normal form – Greibach normal form. Chapter 4 : Section 4.1 to 4.6							
		<b>UNIT-IV</b> : Pushdown automata Informal description- Definitions- Pushdown automata and context-free languages – Normal forms for deterministic pushdown automata. Chapter 5 : Sections 5.1 to 5.3							
		<b>UNIT-V</b> : Properties of context-free languages The pumping lemma for CFL's – Closure properties for CFL's – Decision algorithms for CFL's. Chapter 6 : Sections 6.1 to 6.3							

Recommended Text	John E.Hopcraft and Jeffrey D.Ullman, <i>Introduction to Automata Theory, Languages and Computation</i> , Narosa Publishing House, New Delhi, (1987).
Reference Books	1. A. Salomaa, <i>Formal Languages</i> , Academic Press, New York, (1973). 2. John C. Martin, <i>Introduction to Languages and theory of Computations</i> (2nd Edition) Tata-McGraw Hill Company Ltd., New Delhi, (1997).

### Course Learning Outcome (for Mapping with POs and PSOs)

Students will be able to

**CLO1:** Differentiate deterministic and nondeterministic finite automata.

**CLO2:** Acquire the knowledge of regular sets and its properties.

**CLO3:** Understand the concept of context free grammars and normal form.

**CLO4:** Define context free languages and pushdown automata.

**CLO5:** Explain about context free languages and pushdown automata.

Title of the Course		<b>1.4.3: ALGEBRAIC NUMBER THEORY</b>					
Paper Number		ELECTIVE - I					
Category	Elective	Year	<b>I</b>	Credits	<b>3</b>	Course Code	
		Semester	<b>I</b>				
Instructional Hours per week		Lecture	Tutorial	Lab Practice	Total		
		4	2	--	<b>6</b>		
Prerequisite		UG level Number Theory and Algebra Concept					
Objectives of the Course		To appreciate the significance of approximating irrational numbers, acquired the knowledge of Unique factorizations.					
Course Outline		<b>UNIT-I</b> : Diophantine equations: Diophantine equations – The equation $ax+by=c$ –Positive solutions – Other linear equations.					
		<b>UNIT-II</b> : Some special equations: The equation $x^2+y^2=z^2$ -The equation $x^4 + y^4 = z^2$ –The equation $4x^2 + y^2 = n$					
		<b>UNIT-III</b> : Infinite continued functions: The equations $ax^2+by^2+cz^2=0$ - Infinite continued functions – Irrational numbers.					
		<b>UNIT-IV</b> : Quadratic Fields: Approximation to irrational numbers – Algebraic integers.					
		<b>UNIT-V</b> : Unique Factorization – Units in quadratic fields.					
Recommended Text		<i>An introduction to the Theory of Numbers</i> – Ivan Nivan and Herbert S. Zukerman – II edition, Wiley Eastern Ltd. Chapter 5,6 and 9 (except 5.13, 5.14, 7.7,7.8 and 7.9)					
Reference Books		<i>Elements of Number Theory</i> – Kumaravelu and Suseela Kumaravelu (2002), Raja Shankar Printers, Sivakasi (V edition)					

### Course Learning Outcome (for Mapping with POs and PSOs)

Students will be able to

**CLO 1:** Demonstrate competence with the basic ideas of Diophantine and other linear equations

**CLO 2:** Solve some special equations of the type  $x^2+y^2=z^2$

**CLO 3:** Able to demonstrate infinite continued functions.

**CLO 4:** Appreciate the significance of approximating irrational numbers.

**CLO 5:** Acquired the knowledge of Unique factorizations.

Title of the Course		<b>1.5.1: NUMBER THEORY AND CRYPTOGRAPHY</b>					
Paper Number		ELECTIVE - II					
Category	Elective	Year	<b>I</b>	Credits	<b>3</b>	Course Code	
		Semester	<b>I</b>				
Instructional Hours per week		Lecture	Tutorial	Lab Practice	Total		
		4	2	--	<b>6</b>		
Prerequisite		Mathematics of the UG level					
Objectives of the Course		The main objective of this course is to prepare students who either wish to pursue Mathematics as a career or need to use it from an application point of view. Cryptography and Cryptanalysis is a field where even non-mathematicians who are familiar with Elementary Number theory have flourished and this course will easily feed in their needs to familiarise them with rudiments of Cryptography.					
Course Outline		<b>UNIT-I</b> : The fundamental Theorem of Arithmetic :Divisibility-greatest common divisor-fundamental theorem of Arithmetic-Euclidean Algorithm.					
		<b>UNIT-II</b> : Congruences :Basic properties of congruences-residue classes and complete residue systems-linear congruences-polynomial congruences modulo p-Lagrange's theorem and its applications-Chinese remainder theorem.					
		<b>UNIT-III</b> : Arithmetical functions and Dirichlet Multiplication: Mobius function-Euler totient function- Dirichlet product of Arithmetic functions-Mangoldt functions-multiplicative functions-Liouville's function-Bell series of an arithmetical function-derivatives of arithmetical functions					
		<b>UNIT-IV</b> : CRYPTOGRAPHY Cryptography – some simple cryptosystems – enciphering matrices.					
		<b>UNIT-V</b> : PUBLIC KEY CRYPTOGRAPHY Public key cryptography – idea of public key cryptography – RSA – discrete log –Knapsack cryptosystems.

### Course Learning Outcome (for Mapping with POs and PSOs)

Students will be able to

**CLO 1:** Explain the concept of congruences and prove related results

**CLO 2:** Discuss the properties of different arithmetical functions

**CLO 3:** Derive Euler's summation formula and estimate the average order of different arithmetical functions

**CLO 4:** Explain simple cryptosystems and encipher matrices

**CLO 5:** Demonstrate public key cryptography

Title of the Course		<b>1.5.2: ANALYTIC NUMBER THEORY</b>							
Paper Number		ELECTIVE - II							
Category	Elective	Year	<b>I</b>	Credits	3	Course Code			
		Semester	<b>I</b>						
Instructional Hours per week		Lecture	Tutorial	Lab Practice	Total				
		4	2	--	<b>6</b>				
Prerequisite		Knowledge of differential and integral calculus of real functions in several variables, convergence of series, (uniform) convergence of sequences of functions, basics of complex analysis							
Objectives of the Course		To understand Dirichlet multiplication, a concept which helps clarify interrelationship between various arithmetical functions and also some equivalent forms of the prime number theorem.							
Course Outline		<b>UNIT-I</b> : The Fundamental Theorem of Arithmetic. Chapter 1 : Section 1.1 - 1.8 Exercise Problems:Chapter 1 : 1 - 11.							
		<b>UNIT-II</b> :Arithmetic Functions. Chapter 2: Sections 2.1 - 2.8. Exercise problems:Chapter 2: 1 - 6.							
		<b>UNIT-III</b> : Multiplicative Functions and Dirichlet Multiplication. Chapter 2: Sections 2.9 – 2.14. Exercise problems:Chapter 2: 21 - 23, 25, 26.							

	<p><b>UNIT-IV</b> : Averages of Arithmetical Functions. Chapter 3: Sections 3.1 - 3. 9. Exercise problems:Chapter 3: 1 - 4.</p> <p><b>UNIT-V</b>: Partial sums of Dirichlet Product, Chebyshev’s Functions – Equivalent forms of Prime Number Theorem. Chapter 3: Sections: 3.10, 3.11, Chapter 4: Sections 4.1 – 4.4. Exercise problems: Chapter 4: 3, 4, 5, 8.</p>
Recommended Text	<i>Introduction to Analytic Number Theory</i> – Tom M. Apostol - Springer, International Student Edition.
Reference Books	<ol style="list-style-type: none"> <li>1. <i>Problems in Analytic Number Theory</i>, M. Ram Murty, Springer(2001)</li> <li>2. <i>Steps into Analytic Number Theory</i>, Paul Pollack, Akash Singha Roy, Springer (2021)</li> </ol>

**Course Learning Outcome (for Mapping with POs and PSOs)**

Students will be able to

**CLO 1:** Study the basic concepts of elementary number theory

**CLO 2:** Explain several arithmetical functions and construct their relationships

**CLO 3:** Apply algebraic structure in arithmetical functions

**CLO 4:** Demonstrate various identities satisfied by arithmetical functions

**CLO 5:**Determine the application to  $\mu(n)$  &  $\Lambda(n)$  and several equivalent form of prime number theorem

Title of the Course		<b>1.5.3: FUZZY SETS AND THEIR APPLICATIONS</b>							
Paper Number		ELECTIVE - II							
Category	Elective	Year	I	Credits	3	Course Code			
		Semester	I						
Instructional Hours per week		Lecture	Tutorial		Lab Practice		Total		
		4	2		--		6		
Prerequisite		Knowledge of graphs, relations, composition							

Objectives of the Course	To study about Fuzzy sets and their relations, Fuzzy graphs, Fuzzy relations, Fuzzy logic and laws of Fuzzy compositions
Course Outline	<b>UNIT-I</b> : Fundamental Notions. Chapter I: Sec. 1 to 8
	<b>UNIT-II</b> : Fuzzy Graphs. Chapter II: Sec. 10 to 18
	<b>UNIT-III</b> : Fuzzy Relations. Chapter II: Sec. 19 to 29
	<b>UNIT-IV</b> :Fuzzy Logic. Chapter III:Sec.31 to 40(omit Sec.37,38, 41)
	<b>UNIT-V</b> : The Laws of Fuzzy Composition. Chapter IV: Sec.43 to 49
Recommended Text	A.Kaufman, <i>Introduction to the theory of Fuzzy subsets</i> , Vol.I, Academic Press, New York, (1975).
Reference Books	1. H.J.Zimmermann, <i>Fuzzy Set Theory and its Applications</i> , Allied Publishers, Chennai, (1996) 2. George J.Klir and Bo Yuan, <i>Fuzzy sets and Fuzzy Logic-Theory and Applications</i> , Prentice Hall India, New Delhi, (2001).

### Course Learning Outcome (for Mapping with POs and PSOs)

Students will be able to

**CLO1:** Understand the definition of Fuzzy sets and its related concepts

**CLO2:** Define Fuzzy Graphs and can explain the concepts

**CLO3:** Explain the concepts in Fuzzy sets and its relations

**CLO4:** Discuss about Fuzzy logic

**CLO5:** Analyze the compositions of Fuzzy sets.

## SEMESTER - II

Title of the Course		<b>2.1: ADVANCED ALGEBRA</b>					
Paper Number		CORE - IV					
Category	Core	Year	I	Credits	5	Course Code	
		Semester	II				
Instructional Hours per week		Lecture	Tutorial	Lab Practice	Total		
		4	2	--	6		
Prerequisite		Algebraic Structures					
Objectives of the Course		To study field extension, roots of polynomials, Galois Theory, finite fields, division rings, solvability by radicals and to develop computational skill in abstract algebra.					
Course Outline		<b>UNIT-I</b> : Extension fields – Transcendence of e. Chapter 5: Section 5.1 and 5.2					
		<b>UNIT-II</b> : Roots of Polynomials.- More about roots Chapter 5: Sections 5.3 and 5.5					
		<b>UNIT-III</b> : Elements of Galois theory. Chapter 5 : Section 5.6					
		<b>UNIT-IV</b> : Finite fields - Wedderburn's theorem on finite division rings. Chapter 7: Sections 7.1 and 7.2 (Theorem 7.2.1 only)					
		<b>UNIT-V</b> :Solvability by radicals - A theorem of Frobenius - Integral Quaternions and the Four - Square theorem. Chapter 5: Section 5.7 (omit Lemma 5.7.1, Lemma 5.7.2 and Theorem 5.7.1), Chapter 7 : Sections 7.3 and 7.4					
Skills acquired from this course		Knowledge, Problem Solving, Analytical ability, Professional Competency, Professional Communication and Transferable Skill					
Recommended Text		I.N. Herstein. <i>Topics in Algebra</i> (II Edition) Wiley Eastern Limited, New Delhi, 1975.

### Course Learning Outcome (for Mapping with POs and PSOs)

Students will be able to

**CLO1:** Prove theorems applying algebraic ways of thinking.

**CLO2:** Connect groups with graphs and understanding about Hamiltonian graphs.

**CLO3:** Compose clear and accurate proofs using the concepts of Galois Theory.

**CLO4:** Bring out insight into Abstract Algebra with focus on axiomatic theories.

**CLO5:** Demonstrate knowledge and understanding of fundamental concepts including extension fields, Algebraic extensions, Finite fields, Class equations and Sylow's theorem.

	POs						PSOs

Title of the Course		<b>2.2: REAL ANALYSIS - II</b>					
Paper Number		CORE - V					
Category	Core	Year	<b>I</b>	Credits	<b>5</b>	Course Code	
		Semester	<b>II</b>				
Instructional Hours per week	Lecture	Tutorial		Lab Practice		Total	
	4	2		--		<b>6</b>	
Prerequisite		Elements of Real Analysis					
Objectives of the Course		To introduce measure on the real line, Lebesgue measurability and integrability, Fourier Series and Integrals, in-depth study in multivariable calculus.					
Course Outline		<b>UNIT-I : Measure on the Real line</b> - Lebesgue Outer Measure - Measurable sets - Regularity - Measurable Functions - Borel and Lebesgue Measurability Chapter - 2 Sec 2.1 to 2.5 (de Barra)					
		<b>UNIT-II : Integration of Functions of a Real variable</b> - Integration of Non- negative functions - The General Integral - Riemann and Lebesgue Integrals Chapter - 3 Sec 3.1,3.2 and 3.4 (de Barra)					
		<b>UNIT-III : Fourier Series and Fourier Integrals</b> - Introduction - Orthogonal system of functions - The theorem on best approximation - The Fourier series of a function relative to an orthonormal system - Properties of Fourier Coefficients - The Riesz-Fischer Theorem - The convergence and representation problems in for trigonometric series - The Riemann - Lebesgue Lemma - The Dirichlet Integrals - An integral representation for the partial sums of Fourier series - Riemann's localization theorem - Sufficient conditions for convergence of a Fourier series at a particular point –Cesaro Summability of Fourier series- Consequences of Fejes's theorem - The Weierstrass approximation theorem Chapter 11 : Sections 11.1 to 11.15 (Apostol)					
		<b>UNIT-IV : Multivariable Differential Calculus</b> - Introduction - The Directional derivative - Directional derivative and continuity - The total derivative - The total derivative expressed in terms of partial derivatives - The matrix of linear function - The Jacobian matrix - The chain rule - Matrix form of chain rule - The mean - value theorem for differentiable functions - A sufficient condition for differentiability - A sufficient condition for equality of mixed partial derivatives - Taylor's theorem for functions of $\mathbb{R}^n$ to $\mathbb{R}^1$ Chapter 12 : Section 12.1 to 12.14 (Apostol)					
		<b>UNIT-V : Implicit Functions and Extremum Problems</b> : Functions with non-zero Jacobian determinants – The inverse function theorem- The C theorem-Extrema of real valued functions of several variables- Extremum problems with side conditions. Chapter 13 : Sections 13.1 to 13.7 (Apostol)					

Skills acquired from this course	Knowledge, Problem Solving, Analytical ability, Professional Competency, Professional Communication and Transferable Skill
Recommended Text	1. G. de Barra, <i>Measure Theory and Integration</i> , Wiley Eastern Ltd., New Delhi, 1981. (for Units I and II) 2. Tom M.Apostol : <i>Mathematical Analysis</i> , 2 <sup>nd</sup> Edition, Addison-Wesley Publishing Company Inc. New York, 1974. (for Units III, IV and V)

### Course Learning Outcome (for Mapping with POs and PSOs)

Students will be able to

**CLO1:** Understand measurable function and Lebesgue outer measure

**CLO2:** Explain Riemann and Lebesgue Integral.

**CLO3:** Understand and describe the basic concepts of Fourier series and Fourier integrals with respect to the orthogonal system. Analyze and evaluate the difference between transforms of various functions.

**CLO4:** Explain directional derivative, total derivative, matrix of linear function and sufficient condition for differentiability

**CLO5:** Explain implicit functions and Extremum problems with side conditions.

Title of the Course		<b>2.3: PARTIAL DIFFERENTIAL EQUATIONS</b>					
Paper Number		CORE - VI					
Category	Core	Year	<b>I</b>	Credits	<b>5</b>	Course Code	
		Semester	<b>II</b>				
Instructional Hours per week		Lecture	Tutorial	Lab Practice	Total		
		4	2	--	<b>6</b>		
Prerequisite		UG level Partial Differential Equations					
Objectives of the Course		To classify the second order partial differential equations and to study Cauchy problem, method of separation of variables, boundary value problems.					
Course Outline		<b>UNIT-I :Mathematical Models and Classification of second order equation :</b> Classical equations-Vibrating string – Vibrating membrane – waves in elastic medium – Conduction of heat in solids – Gravitational potential – Second order equations in two independent variables – canonical forms – equations with constant coefficients – general solution Chapter 2 : Sections 2.1 to 2.6 Chapter 3 : Sections 3.1 to 3.4 (Omit 3.5)					
		<b>UNIT-II :Cauchy Problem :</b> The Cauchy problem – Cauchy-Kowalewsky theorem – Homogeneous wave equation – Initial Boundary value problem- Non-homogeneous boundary conditions – Finite string with fixed ends – Non-homogeneous wave equation – Riemann method – Goursat problem – spherical wave equation – cylindrical wave equation. Chapter 4 : Sections 4.1 to 4.11					
		<b>UNIT-III :Method of separation of variables:</b> Separation of variable- Vibrating string problem – Existence and uniqueness of solution of vibrating string problem - Heat conduction problem – Existence and uniqueness of solution of heat conduction problem – Laplace and beam equations Chapter 6 : Sections 6.1 to 6.6 (Omit section 6.7)					
		<b>UNIT-IV : Boundary Value Problems :</b> Boundary value problems – Maximum and minimum principles – Uniqueness and continuity theorem – Dirichlet Problem for a circle , a circular annulus, a rectangle – Dirichlet problem involving Poisson equation – Neumann problem for a circle and a rectangle. Chapter 8 : Sections 8.1 to 8.9					
		<b>UNIT-V : Green’s Function:</b> The Delta function – Green’s function – Method of Green’s function – Dirichlet Problem for the Laplace and Helmholtz operators – Method of images and eigen functions – Higher dimensional problem – Neumann Problem. Chapter 10 : Section 10.1 to 10.9					

Skills acquired from this course	Knowledge, Problem Solving, Analytical ability, Professional Competency, Professional Communication and Transferable Skill
Recommended Text	TynMyint-U and Lokenath Debnath, <i>Partial Differential Equations for Scientists and Engineers</i> (Third Edition), North Holland, New York, 1987.

### Course Learning Outcome (for Mapping with POs and PSOs)

Students will be able to

**CLO1:** To understand and classify second order equations and find general solutions

**CLO2:** To analyse and solve wave equations in different polar coordinates

**CLO3:** To solve Vibrating string problem, Heat conduction problem, to identify and solve Laplace and beam equations

**CLO4:** To apply maximum and minimum principle and solve Dirichlet, Neumann problems for various boundary conditions

**CLO5:** To apply Green's function and solve Dirichlet, Laplace problems, to apply Helmholtz operation and to solve Higher dimensional problem

Title of the Course		<b>2.4.1: ALGEBRAIC TOPOLOGY</b>					
Paper Number		ELECTIVE -III					
Category	Elective	Year	<b>I</b>	Credits	<b>3</b>	Course Code	
		Semester	<b>II</b>				
Instructional Hours per week		Lecture	Tutorial	Lab Practice	Total		
		4	1	--	<b>5</b>		
Prerequisite		UG level Real Analysis, Algebraic Structures and some fundamental knowledge of topology.					
Objectives of the Course		To introduce the ideas of Algebraic Topology to other branches of Mathematics					
Course Outline		<b>UNIT-I</b> : Homotopy of paths, fundamental group of a topological space, homotopy of maps of topological spaces, contractible and simply connected spaces. Chapter 9: Sec: 51, 52.					
		<b>UNIT-II</b> :The Fundamental group of the circle, Path lifting lemma, Retractions and fixed points, Brouwer's fixed- point theorem for the disc, The fundamental Theorem of Algebra. Chapter 9. Sec: 54, 55, 56					
		<b>UNIT-III</b> : Covering spaces, Equivalence of covering spaces, The general lifting lemma, The universal covering space. Chapter 9 : Sec: 53, Chapter 13: Sec: 79, 80					
		<b>UNIT-IV</b> : Separation theorems in the plane, Null homotopy lemma, The Jordan separation theorem, A general separation theorem, Homotopy Extension lemma, Borsuk lemma, Invariance of domain. Chapter 10: Sec: 61, 62					
		<b>UNIT-V</b> : Applications to Group theory: Covering spaces of a graph, The fundamental group of a graph. Chapter 14: Sec 83, 84.					
Recommended Text		James R. Munkres, <i>Topology</i> , Prentice Hall of India, New Delhi, 2002 (2nd Edition).					
Reference Books		<ol style="list-style-type: none"> <li>1. M.K.Agoston, Algebraic topology- A First Course, Marcel Dekker, 1962</li> <li>2. Maunder, Algebraic topology, Van Nastrand, New York, 1970</li> </ol>					

## Course Learning Outcome (for Mapping with POs and PSOs)

Students will be able to

**CLO 1:** Give an account of the concepts homotopy, homology and cohomology, their basic properties and relationships

**CLO 2:** Prove topological results by using algebraic methods

**CLO 3:** Use the theory to solve elementary topological problems

**CLO 4:** Compute algebro-topological invariants in specific examples

**CLO 5:** Explain the fundamental concepts of algebraic topology and their role in modern mathematics and applied contexts.

Title of the Course		<b>2.4.2: MATHEMATICAL STATISTICS</b>					
Paper Number		ELECTIVE - III					
Category	Elective	Year	<b>I</b>	Credits	<b>3</b>	Course Code	
		Semester	<b>II</b>				
Instructional Hours per week		Lecture	Tutorial	Lab Practice	Total		
		4	1	--	<b>5</b>		
Prerequisite		UG level Combinatorics and basic set theory					
Objectives of the Course		To understand mathematical statistics, acquire basic knowledge about various distributions, understand mathematical expectations, marginal and conditional distributions, the gamma and chi-square distributions, the t & F distributions and their applications, moment generating function technique and the Central Limit Theorem.					
Course Outline		<b>UNIT-I</b> : The probability set function – Random Variables – Probability density function – Distribution function – Mathematical expectation – Special mathematical expectations – Chebyshev’s Inequality.					
		<b>UNIT-II</b> : Conditional probability – Marginal and conditional distributions – Stochastic independence Some special distributions: The Binomial, Trinomial and Multinomial distributions – The Poisson distribution					
		<b>UNIT-III</b> : The Gamma and chi-square distributions –The normal distribution – The Bivariate normal distribution. Distributions of functions of random variables –Sampling theory – Transformations of variables of the discrete type – Transformations of variables of the discrete type – Transformations of variables of the continuous type.					
		<b>UNIT-IV</b> : The $\beta$ , t and F distributions – Distributions of order statistics – The moment generating function technique. The distributions of $\chi^2$ and $\frac{nS^2}{\sigma^2}$ – Expectations of functions of random variables.					
		<b>UNIT-V</b> : Limiting distributions -Stochastic convergence – Limiting moment generating functions – The central limit theorem – Some theorems on limiting distributions.					
Recommended Text		Robert V. Hogg and Allen T. Craig, <i>Introduction to Mathematical Statistics</i> (fourth edition) Chapter 1,2 (except 1.1,1.2,1.3,1.8 & 2.3), Chapter 3,4 (except 4.5) and Chapter 5.

Rohatgi, An introduction to Probability theory and Mathematical statistics, Wiley Eastern Limited, New Delhi, 1988</li> </ol>					

### Course Learning Outcome (for Mapping with POs and PSOs)

Students will be able to

**CLO 1:** Discuss the sets, functions of sets, random variables and certain expectations

**CLO 2:** Discuss binomial and related distributions

**CLO 3:** To study various kinds of distributions

**CLO 4:** Discuss additional distributions and order statistics and statistical applications

**CLO 5:** To learn the convergence in distribution of a sequence of random variables

Title of the Course		<b>2.4.3: TENSOR ANALYSIS AND RELATIVITY</b>					
Paper Number		ELECTIVE - III					
Category	Elective	Year	<b>I</b>	Credits	<b>3</b>	Course Code	
		Semester	<b>II</b>				
Instructional Hours per week		Lecture	Tutorial	Lab Practice	Total		
		4	1	--	<b>5</b>		
Prerequisite		UG level Vector Calculus and Mechanics.					
Objectives of the Course		<p>To get the knowledge of Tensor of different orders and tensor calculus in Riemann spaces.</p> <p>To know about the relativity of transformation, kinematics and Doppler effect and to understand about energy, mass and inelastic collision.</p>					
Course Outline		<p><b>UNIT-I : Tensor Algebra :</b> Systems of Different orders – Summation Convention – Kronecker Symbols - Transformation of coordinates in <math>S_n</math> - Invariants – Covariant and Contravariant vectors - Tensors of Second Order – Mixed Tensors – Zero Tensor – Tensor Field – Algebra of Tensors – Equality of Tensors – Symmetric and Skew-symmetric tensors - Outer multiplication, Contraction and Inner Multiplication – Quotient Law of Tensors – Reciprocal Tensor – Relative Tensor – Cross Product of Vectors. Chapter I : I.1 – I.3, I.7 and I.8 and Chapter II : II.1 – II.19</p>					
		<p><b>UNIT-II : Tensor Calculus :</b> Riemannian Space – Christoffel Symbols and their properties. Chapter III: III.1 and III.2</p>					
		<p><b>UNIT-III : Tensor Calculus(contd) :</b> Covariant Differentiation of Tensors – Riemann–Christoffel Curvature Tensor – Intrinsic Differentiation Chapter III:III.3 – III.5</p>					
		<p><b>UNIT-IV: Special Theory of Relativity :</b> Galilean Transformations – Maxwell’s equations – The ether Theory – The Principle of Relativity. Relativistic Kinematics : Lorentz Transformation equations – Events and simultaneity – Example – Einstein Train – Time dilation – Longitudinal Contraction - Invariant Interval - Proper time and Proper distance - World line - Example – twin paradox – addition of velocities – Relativistic Doppler effect. Chapter 7 : Sections 7.1 and 7.2</p>					
		<p><b>UNIT-V: Relativistic Dynamics :</b> Momentum – Energy – Momentum – energy four vector – Force - Conservation of Energy – Mass and energy – Example – inelastic collision – Principle of equivalence – Lagrangian and Hamiltonian formulations. Accelerated Systems : Rocket with constant acceleration – example – Rocket with constant thrust. Chapter 7 : Sections 7.3 and 7.4</p>					

Recommended Text	<ol style="list-style-type: none"> <li>1. U.C. De, Absos Ali Shaikh and Joydeep Sengupta, <i>Tensor Calculus</i>, Narosa Publishing House, New Delhi, 2004. (Units I,II and III)</li> <li>2. D.Greenwood, <i>Classical Dynamics</i>, Prentice Hall of India, New Delhi, 1985(Units IV and V )</li> </ol>

A.S.Eddington. <i>The Mathematical Theory of Relativity</i>, Cambridge University Press, 1930.</li> <li>3. P.G.Bergman, <i>An Introduction to Theory of Relativity</i>, Newyor, 1942.</li> <li>4. C.E.Weatherburn, <i>Riemannian Geometry and the Tensor Calculus</i>, Cambridge, 1938.</li> </ol>

**Course Learning Outcome (for Mapping with POs and PSOs)**

Students will be able to

**CLO1:** Understand the system of different orders in Tenor Algebra.

**CLO2:** Explain about Tensor Calculus in Riemann spaces.

**CLO3:** Understand the concept of Covariant of differentiation and intrinsic differentiation

**CLO4:** Explain about the theory of relativity and Doppler effect.

**CLO5:** Analyze about the conservation of mass and energy.

Title of the Course		<b>2.5.1: WAVELETS</b>					
Paper Number		ELECTIVE - IV					
Category	Elective	Year	<b>I</b>	Credits	<b>3</b>	Course Code	
		Semester	<b>II</b>				
Instructional Hours per week		Lecture	Tutorial	Lab Practice	Total		
		3	1	--	<b>4</b>		
Prerequisite		Basic Analysis and Linear Algebra					
Objectives of the Course		To know about wavelet transformation and Fourier transformations, Wavelet series and Fourier series, Cardinal spline spaces and its properties, functions and wavelets and Cardinal spline wavelets.					
Course Outline		<b>UNIT-I</b> : An Overview : Fourier to Wavelets – Integral Wavelets Transform and Time frequency analysis – Inversion formulas and duals – Classification of Wavelets – Multiresolution analysis – Spines and Wavelets. Fourier Analysis : Fourier and Inverse Fourier Transformation – Continuous Time Convolution – The delta function – Fourier Transformation of square integrable functions.					
		<b>UNIT-II</b> : Fourier Analysis (contd): Fourier Series – Basic Convergence Theory – Poisson Summation Formula. Wavelet Transforms and Time Frequency Analysis : The Gabor Transforms – Short time Fourier Transforms and the uncertainty principle – The integral Wavelet Transform – Dyadic Wavelets – Inversion – Frames – Wavelet Series.					
		<b>UNIT-III</b> : Cardinal Spline Analysis : Cardinal Spline spaces – B-splines and their basic properties – The time scale relation and an interpolating graphical display algorithm – B-Net representations and computation of cardinal splines – Constructions of cardinal splines – constructions of spline application formulas – Construction of Spline interpolation formulas					
		<b>UNIT-IV</b> : functions and Wavelets : Multi-resolution analysis – Scaling functions with finite two scale relation – Direction sum Decompositions of $L^2(\mathbb{R})$ - Wavelets and their duals					
		<b>UNIT-V</b> : Cardinal Splines Wavelets : Interpolating splines wavelets – Compactly supported spline – Wavelets – Computation of Cardinal spline Wavelets – Euler – Frebenious Polynomials(12 hours). Orthogonal Wavelets : Examples of orthogonal Wavelets – Identification of orthogonal two scale symbols – Construction of compactly supported orthogonal wavelets.					
Recommended Text		Content and Treatment as in Charles K. Chui, <i>An introduction to Wavelets</i> , Academic Press, New York, 1992.

**SEMESTER - III**

Title of the Course		<b>3.1: COMPLEX ANALYSIS</b>					
Paper Number		CORE - VII					
Category	Core	Year	<b>II</b>	Credits	<b>5</b>	Course Code	
		Semester	<b>III</b>				
Instructional Hours per week		Lecture	Tutorial	Lab Practice	Total		
		4	2	--	<b>6</b>		
Pre-requisite		UG level Complex Analysis					
Objectives of the Course		To Study Cauchy integral formula, local properties of analytic functions, general form of Cauchy's theorem and evaluation of definite integral and harmonic functions.					
Course Outline		<b>UNIT-I :Analytic functions:</b> Analytic functions- Polynomials-Rational functions-Power Series Chapter 2: Section 2.1.2-2.1.4, 2.2.4 Problems: Chapter 2: 2.1.2 (1,4,5,7), 2.2.4(2-6)					
		<b>UNIT-II : Cauchy's Integral Formula:</b> The Index of a point with respect to a closed curve – The Integral formula – Higher derivatives. Local Properties of analytic Functions:Removable Singularities-Taylor's Theorem – Zeros and poles – The local Mapping – The Maximum Principle. Chapter 4: Section 2 : 4.2.1 to 4.2.3,Chapter 4 : Section 3 : 4.3.1 to4. 3.4					
		<b>UNIT-III : The general form of Cauchy's Theorem :</b> Chains and cycles- Simple Continuity - Homology - The General statement of Cauchy's Theorem - Proof of Cauchy's theorem - Multiply connected regions - Residue theorem - The argument principle. Chapter 4 : Section 4 : 4.4.1 to 4.4.7( except 4.4.6), Chapter 4 : Section 5: 4.5.1 and 4.5.2					
		<b>UNIT-IV : Evaluation of Definite Integrals and Harmonic Functions</b> Evaluation of definite integrals - Definition of Harmonic function and basic properties - Mean value property - Poisson formula. Chapter 4 : Section 5 : 4.5.3, Chapter 4 : Sections 6 : 4.6.1 to 4.6.3					
		<b>UNIT-V: Harmonic Functions and Power Series Expansions:</b> Schwarz theorem - The Reflection principle - Weierstrass theorem – Taylor's Series – Laurent series . Chapter 4 : Sections 6.4.6.4 and 4.6.5, Chapter 5 : Sections 4.6.1 to 4.6.3					
Skills acquired from this course		Knowledge, Problem Solving, Analytical ability, Professional Competency, Professional Communication and Transferable Skill					
Recommended Text		Lars V. Ahlfors, <i>Complex Analysis</i> , (3 <sup>rd</sup> edition) McGraw Hill Co., New York, 1979

### Course Learning Outcome (for Mapping with POs and PSOs)

Students will be able to

**CLO1:** Explain analytic functions and power Series.

**CLO2:** Explain index of a point, integral formula, higher derivatives and removable singularities

**CLO3:** Demonstrate the concept of the general form of Cauchy's theorem

**CLO4:** Describe the concept of definite integral and harmonic functions.

**CLO5** Develop Taylor and Laurent series .

Title of the Course		<b>3.2 PROBABILITY THEORY</b>					
Paper Number		<b>CORE VIII</b>					
Category	Core	Year	II	Credits	5	Course Code	
		Semester	III				
Instructional Hours per week		Lecture	Tutorial	Lab Practice	Total		
		4	1	--	5		
Pre-requisite		UG level statistics					
Objectives of the Course		To introduce axiomatic approach to probability theory, to study some statistical characteristics, discrete and continuous distribution functions and their properties, characteristic function and basic limit theorems of probability.					
Course Outline		<b>UNIT-I : Random Events and Random Variables:</b> Random events – Probability axioms – Combinatorial formulae – conditional probability – Bayes Theorem – Independent events – Random Variables – Distribution Function – Joint Distribution – Marginal Distribution – Conditional Distribution – Independent random variables – Functions of random variables. Chapter 1: Sections 1.2 to 1.7 Chapter 2 : Sections 2.1 to 2.9					
		<b>UNIT-II : Parameters of the Distribution :</b> Expectation-Moments –The Chebyshev Inequality – Absolute moments – Order parameters –Moments of random vectors – Regression of the first and second types. Chapter 3 : Sections 3.1 to 3.8					
		<b>UNIT-III: Characteristic functions :</b> Properties of characteristic functions – Characteristic functions and moments – semi-invariants – characteristic function of the sum of the independent random variables – Determination of distribution function by the Characteristic function – Characteristic function of multidimensional random vectors – Probability generating functions. Chapter 4 : Sections 4.1 to 4.7					
		<b>UNIT-IV : Some Probability distributions:</b> One point , two point , Binomial – Polya – Hypergeometric – Poisson (discrete) distributions – Uniform – Normal - Gamma – Beta – Cauchy and Laplace (continuous) distributions. Chapter 5 : Section 5.1 to 5.10 (Except 5.3)					
		<b>UNIT-V: Limit Theorems :</b> Stochastic convergence – Bernaulli law of large numbers – Convergence of sequence of distribution functions – de Moivre-Laplace Theorem– Lindberg Theorem – Lapunov Theroem - Poisson, Chebyshev, Khintchine Weak law of large numbers Chapter 6 : Sections 6.1 to 6.4, 6.7, 6.8 and 6.11					
Skills acquired from this course		Knowledge, Problem Solving, Analytical ability, Professional Competency, Professional Communication and Transferrable Skill					
Recommended Text		M. Fisz, <i>Probability Theory and Mathematical Statistics</i> , John Wileyand Sons, New York, 1963.

### Course Learning Outcome (for Mapping with POs and PSOs)

Students will be able to

**CLO1:** To define random events, random variables, to describe probability, to apply bayes, to define distribution function, to find joint distribution function, to find marginal distribution and conditional distribution function, to solve functions on random variables.

**CLO2:** To define expectation, moments and Chebyshev inequality, to solve regression of the first and second types.

**CLO3:** To define characteristic functions, to define distribution function, to find probability generating functions, to solve problems applying characteristic functions

**CLO4:** To define one point, two-point, Binomial distributions, to solve problems of hypergeometric and Poisson distributions, to define uniform, normal, gamma, beta distributions, to solve problems on Cauchy and Laplace distributions

**CLO5:** To discuss stochastic convergence, Bernaulli law of large numbers, to elaborate convergence of sequence of distribution functions, de Moivre-Laplace theorems, to explain Poisson, Chebyshev, Khintchine weak law of large numbers.

Title of the Course		<b>3.3: TOPOLOGY</b>							
Paper Number		CORE - IX							
Category	Core	Year	<b>II</b>		Credits	<b>5</b>	Course Code		
		Semester	<b>III</b>						
Instructional Hours per week		Lecture		Tutorial		Lab Practice		Total	
		4		2		--		<b>6</b>	
Pre-requisite		UG level Real Analysis							
Objectives of the Course		To study topological spaces, continuous functions, connectedness, compactness, countability and separation axioms.							
Course Outline		<b>UNIT-I : Topological spaces :</b> Topological spaces – Basis for a topology – The order topology – The product topology on $X \times Y$ – The subspace topology – Closed sets and limit points. Chapter 2 : Sections 12 to 17							
		<b>UNIT-II :Continuous functions:</b> Continuous functions – the product topology – The metric topology. Chapter 2 : Sections 18 to 21							
		<b>UNIT-III :Connectedness:</b> Connected spaces- Components and Local Connectedness Chapter 3 : Sections 23& 25.							
		<b>UNIT-IV : Compactness :</b> Compact spaces – Limit Point Compactness – Local Compactness. Chapter 3 : Sections 26 to 29(except 27).							
		<b>UNIT-V: Countability and Separation Axiom:</b> The Countability Axioms – The separation Axioms – Normal spaces – The Urysohn Lemma – The Urysohn Metrization Theorem Chapter 4 : Sections 30 to 34.							
Skills acquired from this course		Knowledge, Problem Solving, Analytical ability, Professional Competency, Professional Communication and Transferable Skill

### Course Learning Outcome (for Mapping with POs and PSOs)

Students will be able to

**CLO1:** Define and illustrate the concept of topological spaces and the basic definitions of open sets, neighbourhood, interior, exterior, closure and their axioms for defining topological space.

**CLO2:** Understand continuous functions, the product topology and metric topology.

**CLO3:** Understand Connected spaces, Components and Local Connectedness

**CLO4:** Understand Compact spaces, Limit Point Compactness and Local Compactness.

**CLO5:** Develop qualitative tools to characterize connectedness and compactness

Title of the Course		<b>3.4:CALCULUS OF VARIATIONS AND INTEGRAL EQUATIONS</b>					
Paper Number		CORE - X					
Category	Elective	Year	<b>II</b>	Credits	<b>4</b>	Course Code	
		Semester	<b>III</b>				
Instructional Hours per week		Lecture	Tutorial	Lab Practice	Total		
		4	1	--	<b>5</b>		
Pre-requisite		Basic knowledge in Set theory and Matrix theory					
Objectives of the Course		The aim of the paper is to introduce some of the most fundamental Algebraic Structures like inner product space, Determinants, etc'					
Course Outline		<b>UNIT-I</b> : Calculus of Variations and Applications Maxima and Minima – The simplest case –Illustrative examples-The variational notation-the more general case.					
		<b>UNIT-II</b> : Constraints and Lagrange's Multipliers – Variable endpoints - Sturm Liouville problems-Hamilton's principles - Lagrange equations					
		<b>UNIT-III</b> : Integral Equations – Introduction –Relation between differential and integral equations – The Green's function - Alternative definition of Green's function.					
		<b>UNIT-IV</b> : Linear Equations in cause and effect - The influence function – Fredholm equations with separable kernels – Illustrative Examples.					
		<b>UNIT-V</b> : Hilbert Schmidt theory – Iterative methods for solving equations of second kind-Fredholm theory					
Recommended Text		Methods of Applied Mathematics, Francis B. Hildebrand, sections 2.1to 2.11,3.1 to 3.9 and 3.11.					

### Course Learning Outcome (for Mapping with POs and PSOs)

Students will be able to

- CLO 1:** Understand the Calculus of Variations and Applications
- CLO 2:** Understand the Constraints and Lagrange's Multipliers
- CLO 3:** Integral Equations
- CLO 4:** Explain the causes and effects of Linear Equations
- CLO 5:** Explain the Hilbert Schmidt theory

Title of the Course		<b>3.5.1: RESEARCH METHODOLOGY</b>					
Paper Number		Elective V					
Category	Elective	Year	<b>II</b>	Credits	<b>4</b>	Course Code	
		Semester	<b>III</b>				
Instructional Hours per week		Lecture	Tutorial	Lab Practice	Total		
		4	1	-	<b>5</b>		
Pre-requisite		Basic knowledge in Research problems and related information to be useful for Research.					
Objectives of the Course		To understand the Basic aspects in Research, to learn Mathematical Technique for Research and to acquire basic knowledge about various instruments in Mathematical Research.					
Course Outline		<b>UNIT I</b> : To know about writing style - Writing clearly and concisely-Level of formality - Using gender- neutral language-reading other research project Chapter 3: Section 3.1 – 3.4					
		<b>UNIT II</b> : Tips and Strategies-Planning carefully-Deciding on your writing approach- Sourcing and selecting information - Recording information/making notes Chapter 4: Section 4.1 – 4.4.					
		<b>UNIT III</b> : Research Project: Research Project – Difference between a dissertation and a thesis - Basic requirements of research degree – Writing a proposal – Ethical considerations Chapter 5 ; Sec 5.1, 5.2, 5.3, 5.6,5.13					
		<b>UNIT IV</b> : Different components of a Research Project – Title page – Abstract- Acknowledgement - List of Contents – Introduction- Literature Review -Methodology – Style of Presentation – Conclusions–Bibliography–Appendices. Chapter 6: Section 6.1 – 6.4, 6.6, 6.7, 6.8.1, 6.9.1, 6.11 – 6.13					
		<b>UNIT V</b> :Publishing and presenting your research and Tool kit- Journal Articles - A book - conference presentation- A final note - All punctuations. Chapters 7 & 8					
Recommended Text		Writing up your University Assignments and Research Projects – A Practical Handbook, Neil Murray and Geraldine Hughes, McGraw Hill Open University Press.					

### **Course Learning Outcome (for Mapping with POs and PSOs)**

Students will be able to

**CLO1:** Discuss to know about writing style

**CLO2:** Discuss the Tips and Strategies

**CLO3:** To know about the research project

**CLO4:** Discuss the different components of Research Project

**CLO5:** To learn the Publication and presentation of research articles and Tool kits

Title of the Course		<b>3.5.2: MATHEMATICAL PYTHON - THEORY</b>					
Paper Number		Elective V					
Category	Elective	Year	<b>II</b>	Credits	<b>4</b>	Course Code	
		Semester	<b>III</b>				
Instructional Hours per week		Lecture	Tutorial	Lab Practice	Total		
		4	1	--	<b>5</b>		
Pre-requisite		Basic computer skills, mathematical problem solving					
Objectives of the Course		To demonstrate Problem Solving Techniques, Algorithmic Problem Solving , Understanding of basic Python and Python functions in mathematical problem solving					
Course Outline		<b>UNIT-I : PROBLEM SOLVING TECHNIQUES:</b> Problem solving Techniques – Algorithm, flowchart, pseudocode, programming; Algorithms: properties, quality (time, space); building blocks of algorithms - statements, state, control flow, functions, notation (pseudo code, flow chart, programming language)					
		<b>UNIT-II :ALGORITHMIC PROBLEM SOLVING:</b> Algorithmic problem solving, simple strategies for developing algorithms (iteration, recursion), pseudocode for some Mathematical Problems – greatest of two numbers, print n natural numbers, greatest common divisor, fibonacci sequence upto n terms. Practical applications of algorithms.					
		<b>UNIT-III : INTRODUCTION TO PYTHON:</b> Introduction to Python, Python interpreter, Modes of Python Interpreter, Values and Data Types, Variables, Keywords, Identifiers, Statements and Expressions, Input and Output, Comments, Docstring, Lines and Indentation, Quotation, Tuple Assignment, Operators and Types of Operators, Operator Precedence.					
		<b>UNIT-IV : PYTHON FUNCTIONS:</b> Functions, Types of function, Function definition (Sub program), Flow of Execution, Function Prototypes, Parameters and Arguments; Modules; Conditionals: Boolean values and operators, conditional (if), alternative (if-else), chained conditional (if-else-if); Iteration: state, while, for, break, continue, pass; Fruitful functions: return values, parameters, local and global scope, function composition, recursion.					

	<b>UNIT-V: STRING, LISTS, TUPLES IN PYTHON:</b> Strings: string slices, immutability, string functions and methods, string module; Lists as arrays. Lists: list operations, list slices, list methods, list loop, mutability, aliasing, cloning lists, list parameters; Tuples: tuple assignment, tuple as return value.

Title of the Course		<b>3.5.3: MECHANICS</b>					
Paper Number		Elective V					
Category	Core	Year	<b>II</b>	Credits	<b>4</b>	Course Code	
		Semester	<b>III</b>				
Instructional Hours per week		Lecture	Tutorial	Lab Practice	Total		
		5	--	--	<b>5</b>		
Pre-requisite		UG level Calculus and Differential equations.					
Objectives of the Course		To study mechanical systems under generalized coordinate systems, virtual work, energy and momentum, to study mechanics developed by Newton, Langrange, Hamilton Jacobi and Theory of Relativity due to Einstein.					
Course Outline		<b>UNIT-I</b> : Mechanical Systems : The Mechanical system- Generalised coordinates – Constraints - Virtual work - Energy and Momentum Chapter 1 : Sections 1.1 to 1.5					
		<b>UNIT-II</b> : Lagrange's Equations: Derivation of Lagrange's equations- Examples- Integrals of motion. Chapter 2 : Sections 2.1 to 2.3					
		<b>UNIT-III</b> : Hamilton's Equations : Hamilton's Principle - Hamilton's Equation - Other variational principle. Chapter 4 : Sections 4.1 to 4.3					
		<b>UNIT – IV</b> : Hamilton-Jacobi Theory : Hamilton Principle function – Hamilton-Jacobi Equation - Separability Chapter 5 : Sections 5.1 to 5.3					
		<b>UNIT-V</b> : Canonical Transformation : Differential forms and generating functions – Special Transformations– Lagrange and Poisson brackets. Chapter 6 : Sections 6.1, 6.2 and 6.3					
Skills acquired from this course		Knowledge, Problem Solving, Analytical ability, Professional Competency, Professional Communication and Transferable Skill					
Recommended Text		D. Greenwood, <i>Classical Dynamics</i> , Prentice Hall of India, New Delhi, 1985.

### Course Learning Outcome (for Mapping with POs and PSOs)

Students will be able to

**CLO1:** Demonstrate the knowledge of core principles in mechanics.

**CLO2:** Interpret and consider complex problems of classical dynamics in a systematic way.

**CLO3:** Apply the variation principle for real physical situations.

**CLO4:** Explore different applications of these concepts in the mechanical and electromagnetic fields.

**CLO5:** Describe and apply the concept of Angular momentum, Kinetic energy and Moment of inertia of a particle

### Course Learning Outcome (for Mapping with POs and PSOs)

Students will be able to

**CLO1:** Discuss Artificial Intelligence including topics, branches, and applications

**CLO2:** Explain the significance of intelligent agents in the Artificial Intelligence.

**CLO3:** Explain the significance of knowledge.

**CLO4:** Explain the bases structures and algorithms.

**CLO5:** Illustrate how Artificial Intelligence works in Gaming applications (basics only).

		3			--		3
<b>Pre-requisite</b>		UG level Statistics Knowledge					
<b>Objectives of the Course</b>		This course aims in imparting R programming skills to the learners for effective data analysis and visualization					
<b>Course Outline</b>		<b>UNIT-I :</b> Introduction to R programming - Installing R and R Studio - R Studio overview working in the console.					
		<b>UNIT II :</b> Arithmetic operators -logical operators – functions- Data structures in R - creating variables - numeric, character and logical data – vectors .					
		<b>UNIT III :</b> Data frames– factors - sorting numeric, character, and factor vectors -Control statements in R – loop statements					
		<b>UNIT IV :</b> R packages - installing and loading packages - setting up your working directory - working with missing data-					
		<b>UNIT V :</b> Statistical graphs - Scatter Plots - Box Plots- Histograms – Bar plots – pie chart - ggplot2 package to visualize data					
Skills acquired from this course		Get an idea to collect, compile and visualize data using simple statistical functions					
<b>Recommended Text</b>		Sandip Rakshit, R Programming for Beginners, McGraw Hill Education (India), 2017.					

## Course Learning Outcome (for Mapping POs and PSOs)

---

Students will be able to

**CLO1:** Understand the fundamentals of R.

**CLO2:** Illustrate the loading, retrieval techniques of data.

**CLO3:** Understand how data is analyzed using simple functions

**CLO4:** Use flow control statements in simple programs

**CLO5:** Explain Histograms, plots and ggplot 2 visualise data.

Title of the Course		<b>3.6.3. PROGRAMMING IN C++</b>					
Paper Number		3.6: Skill Enhancement Course - II					
Category	Elective	Year	<b>II</b>	Credits	<b>2</b>	Course Code	
		Semester	<b>III</b>				
Instructional Hours per week		Lecture	Tutorial	Lab Practice	Total		
		3	-	--	<b>3</b>		
Pre-requisite		Knowledge of C- Programming					
Objectives of the Course		To provide fundamental knowledge on C++ programming for formulating algorithms					
Course Outline		<b>UNIT-I:</b> Structure of C++ program – Tokens – Keywords –Identifies and constants- all data types – Constants – all variables – All operators- Manipulator. Chapter 2 : Sec : 2.6 Chapter 3 : Sec : 3.1 – 3.18 .					
		<b>UNIT-II :</b> All Expressions – Conversion – Operator overloading – Operator Precedence – Control Structures- Functions in C++ - Introduction – Main Function – Function Prototyping- Return by reference Chapter 3, Sec: 3.19 -3.24 Chapter 4, Sec : 4.1 – 4.5					
		<b>UNIT-III :</b> Inline Functions – arguments – Function overloading – all functions classes and Objects. Chapter 4 , Sec: 4.6 -4.11 Chapter 5, Sec: 5.1 – 5.5					
		<b>UNIT-IV :</b> Nesting of member functions – Private member function – Arrays with in a class and Objects – Friendly function – Returning Objects – Pointers to members – Local Classes Chapter 5, Sec 5.7 – 5.19					
		<b>UNIT-V:</b> Constructors and Destructors – Operator over loading and Type conversions. Chapter 6 & 7.					
Recommended Text		1.E.Balagurusamy, Object Oriented Programming with C++ , 4 <sup>th</sup> Edition, The McGraw- Hill Company, New Delhi, 2008.					
Reference Books		1.V.Ravichandran, Programming with C++, Second Edition Tata McGraw- Hill, New Delhi, 2006.					

**Course Learning Outcome (for Mapping with POs and PSOs)**

Students will be able to

**CLO1:** To understand the structure of C++ program

**CLO2:** Explain Control Structures- Functions in C++.

**CLO3:** Explain all functions classes and Objects.

**CLO4:** Explain the Nesting of member functions

**CLO5:** Explain Constructors and Destructors

**SEMESTER-III - Internship / Industrial Activity /Field visit/ Research Knowledge updation Activity / Literacy**

Subject Code	Subject Name	Category	L	T	P	O	Credits	Inst. Hours	Marks		
									CIA&c	External	Total
	Internship / Industrial Activity /Field visit/ Research Knowledge updation Activity / Literacy	I A	-	-	Y	-	2	-	50	50	100
<b>Learning Objectives</b>											
CO1	To enhance student to work as team work.										
CO2	To equipped the student with the skill and desire to solve societal problems										
CO3	To developed work ethic.										
CO4	To improve communication skill and responsibilities among students										
CO5	To explore, experience and apply the academic knowledge in ground										
<b>Course Outcomes</b>											
<b>Course Outcomes</b>	On completion of this course, students will / can;										

<b>CO1</b>	Enhance the professional competency to conduct field work.	PO1
<b>CO2</b>	Gain practical knowledge related to their studies.	PO4, PO6
<b>CO3</b>	Help student to understand the subject theories and methodology better.	PO1, PO2
<b>CO4</b>	Gain particle skill and knowledge.	PO4, PO5, PO6
<b>CO5</b>	Increase the employment prospect of the student	PO3, PO8
<b>Methods of Evaluation</b>		
<b>Internal Evaluation</b>	Certificate from the Organisation	25 Marks
	Viva Voce Examination	25 Marks
<b>External Evaluation</b>	Internship report	50 Marks
	Total	100 Marks
<b>Methods of Assessment</b>		
<b>Recall (K1)</b>	Simple definitions, MCQ, Recall steps, Concept definitions	
<b>Understand/Comprehend (K2)</b>	MCQ, True/False, Short essays, Concept explanations, short summary or overview	
<b>Application (K3)</b>	Suggest idea/concept with examples, suggest formulae, solve problems, Observe, Explain	
<b>Analyze (K4)</b>	Problem-solving questions, finish a procedure in many steps, Differentiate between various ideas, Map knowledge	
<b>Evaluate (K5)</b>	Longer essay/ Evaluation essay, Critique or justify with pros and cons	
<b>Create (K6)</b>	Check knowledge in specific or offbeat situations, Discussion, Debating or Presentations

**SEMESTER - IV**

Title of the Course		<b>4.1: FUNCTIONAL ANALYSIS</b>					
Paper Number		CORE - XI					
Category	Core	Year	<b>II</b>	Credits	<b>5</b>	Course Code	
		Semester	<b>IV</b>				
Instructional Hours per week		Lecture	Tutorial	Lab Practice	Total		
		4	2	--	<b>6</b>		
Prerequisite		Elements of Real Analysis					
Objectives of the Course		To provide students with a strong foundation in functional analysis, focusing on spaces, operators and fundamental theorems. To develop student's skills and confidence in mathematical analysis and proof techniques.					
Course Outline		<b>UNIT-I : Banach Spaces:</b> The definition and some examples – Continuous linear transformations – The Hahn-Banach theorem – The natural imbedding of $N$ in $N^{**}$ Chapter 9:Sections 46-49					
		<b>UNIT-II:</b> The open mapping theorem – The conjugate of an Operator. The definition and some simple properties–Orthogonal complements– Orthonormal sets Chapter 9:Sections 50-54					
		<b>UNIT-III :</b> The conjugate space $H^*$ -The adjoint of an operator–self-adjoint operators-Normal and unitary operators – Projections. Chapter10:Section 55-59					
		<b>UNIT-IV : Finite-Dimensional Spectral Theory:</b> Determinants and the spectrum of an operator –The spectral theorem. Chapter 11:Sections 61,62					
		<b>UNIT-V : General Preliminaries on Banach Algebras:</b> The definition and some examples – Regular and singular elements – Topological divisors of zero – The spectrum – The formula for the spectral radius– The radical and semi-simplicity. Chapter 12:Sections 64-69					
Skills acquired from this course		Knowledge, Problem Solving, Analytical ability, Professional Competency, Professional Communication and Transferable Skill					
Recommended Text		G.F. Simmons, <i>Introduction to Topology and Modern Analysis</i> , McGraw Hill Education (India)Private Limited, New Delhi, 1963.

### Course Learning Outcome (for Mapping with POs and PSOs)

Students will be able to

**CLO1:** Understand the Banach spaces and Transformations on Banach Spaces.

**CLO2:** Prove open mapping theorem.

**CLO3:** Describe operators and fundamental theorems.

**CLO4:** Validate spectral theorem.

**CLO5:** Analyze and establish the regular and singular elements.

Title of the Course		<b>4.2: DIFFERENTIAL GEOMETRY</b>					
Paper Number		CORE - XII					
Category	Core	Year	<b>II</b>	Credits	<b>4</b>	Course Code	
		Semester	<b>IV</b>				
Instructional Hours per week	Lecture	Tutorial		Lab Practice		Total	
	4	2		--		<b>6</b>	
Prerequisite		Linear Algebra concepts and Calculus					
Objectives of the Course		This course introduces space curves and their intrinsic properties of a surface and geodesics. Further the non-intrinsic properties of surface and the differential geometry of surfaces are explored					
Course Outline		<b>UNIT-I : Space curves:</b> Definition of a space curve – Arc length – tangent – normal and binormal – curvature and torsion – contact between curves and surfaces- tangent surface- involutes and evolutes- Intrinsic equations – Fundamental Existence Theorem for space curves- Helies. Chapter I : Sections 1 to 9.					
		<b>UNIT-II :Intrinsic properties of a surface:</b> Definition of a surface – curves on a surface – Surface of revolution – Helicoids – Metric- Direction coefficients – families of curves- Isometric correspondence- Intrinsic properties. Chapter II: Sections 1 to 9.					
		<b>UNIT-III : Geodesics:</b> Geodesics – Canonical geodesic equations – Normal property of geodesics- Existence Theorems – Geodesic parallels – Geodesics curvature- Gauss- Bonnet Theorem – Gaussian curvature- surface of constant curvature. Chapter II: Sections 10 to 18.					
		<b>UNIT-IV : Non Intrinsic properties of a surface:</b> The second fundamental form- Principal curvature – Lines of curvature – Developable - Developable associated with space curves and with curves on surface - Minimal surfaces – Ruled surfaces. Chapter III: Sections 1 to 8.					
		<b>UNIT-V :Differential Geometry of Surfaces :</b> Compact surfaces whose points are umblics- Hilbert’s lemma – Compact surface of constant curvature – Complete surface and their characterization – Hilbert’s Theorem – Conjugate points on geodesics. Chapter IV : Sections 1 to 8					
Skills acquired from this course		Knowledge, Problem Solving, Analytical ability, Professional Competency, Professional Communication and Transferable Skill					
Recommended Text		T.J.Willmore, <i>An Introduction to Differential Geometry</i> , Oxford University Press,(17 <sup>th</sup> Impression) New Delhi 2002. (Indian Print)

### Course Learning Outcome (for Mapping with POs and PSOs)

Students will be able to

**CLO1:** Explain space curves, Curves between surfaces, metrics on a surface, fundamental form of a surface and Geodesics.

**CLO2:** Evaluate these concepts with related examples.

**CLO3:** Compose problems on geodesics.

**CLO4:** Recognize applicability of developable.

**CLO5:** Construct and analyze the problems on curvature and minimal surfaces

Subject Code	Subject Name	Category	L	T	P	O	Credits	Inst. Hours
	Project with Viva Voce	PVV	Y	-	Y	-	7	9

<b>Learning Objectives</b>		
CO1	To assess the student dissertation for the award of degree, jointly by supervisor and one external examiner affiliated to Manonmaniam Sundaranar University .	
CO2	To develop confident and empowers student for future career.	
CO3	To better prepare students for solving real-world problems and issues while teaching them, encouraging giving additional information related to their topic.	
CO4	To developed student interpersonal skills.	
CO5	To encourages students to develop a balanced, diverse approach to solving real-societal problems, both on their own and in a team	
<b>Course Outcomes</b>		
<b>Course Outcomes</b>	On completion of this course, students will / can;	
CO1	Gives the student a skill such as problem solving, and helps to develop additional skills integral to their future, such as critical thinking and time management.	PO1
CO2	Enhance their knowledge through particals and experience.	PO1, PO2
CO3	Be developed interpersonal skills and decision-making skills.	PO4, PO6
CO4	Give a platform to demonstrate his/her abilities.	PO4, PO5, PO6
CO5	Be able to identify the strength and weakness, which will help them to enhance and improve their ability.	PO3, PO8
<b>Methods of Evaluation</b>		

<b>Internal Evaluation</b>	Dissertation Submission	50 Marks
<b>External Evaluation</b>	Viva Voce Examination	50 Marks
	Total	100 Marks
<b>Methods of Assessment</b>		
<b>Recall (K1)</b>	Simple definitions, MCQ, Recall steps, Concept definitions	
<b>Understand/ Comprehend (K2)</b>	MCQ, True/False, Short essays, Concept explanations, short summary or overview	
<b>Application (K3)</b>	Suggest idea/concept with examples, suggest formulae, solve problems, Observe, Explain	
<b>Analyze (K4)</b>	Problem-solving questions, finish a procedure in many steps, Differentiate between various ideas, Map knowledge

Title of the Course		<b>4.4.1: RING THEORY AND LATTICES</b>					
Paper Number		ELECTIVE - VI					
Category	Elective	Year	<b>II</b>	Credits	<b>4</b>	Course Code	
		Semester	<b>IV</b>				
Instructional Hours per week		Lecture	Tutorial	Lab Practice	Total		
		5	1	-	<b>6</b>		
Prerequisite		Basic knowledge in Group and its properties					
Objectives of the Course		The aim of the paper is to introduce about Rings, properties of rings and lattices.					
Course Outline		<b>UNIT-I</b> : Ring Homomorphisms – Ideals and Quotient Rings – More Ideals and Quotient Rings – The field of Quotients of an Integral Domain Text 1: Sections: 3.3 – 3.6					
		<b>UNIT-II</b> : Euclidean Rings – A Particular Euclidean Ring. Text 1: Sections: 3.7 and 3.8					
		<b>UNIT-III</b> : Polynomial Rings – Polynomials over Rational Field – Polynomial Rings over Commutative Rings Text 1: Sections: 3.9 – 3.11.					
		<b>UNIT-IV</b> : Certain Radicals of a Ring – Jacobson Radical of a Ring –Semisimple Ring – Nil Radical Text 2: Chapter 8: Definition 8.1 –Theorem 8.10.					
		<b>UNIT-V</b> : Partially Ordered sets and Lattices- Distributivity and Modularity- The theorem of Jordan Holder - Boolean Algebra Text 3: Chapter 8 Sections 8.1-8.3 & 8.5					
Recommended Text		<ol style="list-style-type: none"> <li>1. Topics in Algebra, I.N. Herstein, 2<sup>nd</sup> Edition, Wiley Student edition</li> <li>2. A first Course in Rings and Ideals, David M. Burton, Addison - Wesley Publishing Company.</li> <li>3. Basic Algebra 1 Nathan Jacobson Yale University, W.H.Freeman and company. New York, 2<sup>nd</sup> Edition</li> </ol>					

### Course Learning Outcome (for Mapping with POs and PSOs)

On successful completion of the course, the students will be able to

	Course outcome	Cognitive Level
CO 1	Demonstrate competence with the basic ideas of algebra including the concepts of ideals and quotient Rings.	K-2
CO 2	Understand the concept of the Particular Euclidean ring.	K-3
CO 3	Able to demonstrate about the Polynomial rings over Commutative rings.	K-3

CO 4	Appreciate the significance Radicals	K-3
CO 5	Acquired the knowledge of direct sum of rings	K-3

K-1: Remembering; K-2: Understanding; K-3: Applying; K-4: Analyzing; K-5: Evaluating; K-6: Creating.

### **Course Learning Outcome (for Mapping with POs and PSOs)**

Students will be able to

**CLO 1:** Write programs using advanced concepts of Python.

**CLO 2:** Write, Test and Debug Python Programs.

**CLO 3:** Implement Conditionals and Loops for Python Programs.

**CLO 4:** Use functions and represent Compound data using Lists, Tuples and Dictionaries.

**CLO 5:**Read, write and manipulate data from & to files in Python.

Title of the Course		<b>4.4.3: STOCHASTIC PROCESS</b>					
Paper Number		ELECTIVE -VI					
Category	Elective	Year	<b>II</b>	Credits	<b>4</b>	Course Code	
		Semester	<b>III</b>				
Instructional Hours per week		Lecture	Tutorial	Lab Practice	Total		
		4	1	--	<b>5</b>		
Prerequisite		Probability Theory					
Objectives of the Course		To get an idea of different types of processes and to know about the Markov chains. Also to know about the Brownian Motion and Renewal processes.					
Course Outline		<b>UNIT-I : Markov Chains</b> : Classification of general stochastic processes – markov chain – Examples – Transition probability matrix – Classification of states - Recurrence Chapter 1 : Section 3 only and Chapter 2 : sections 1 to 5.					
		<b>UNIT-II : Limit theorems of Markov chains</b> : Discrete renewal equation and its proof – Absorption probabilities – criteria for recurrence – Queuing models Chapter 3 : Sections 1 to 7					
		<b>UNIT-III : Continuous time Markov Chains</b> : Poisson process – Pure Birth process – Birth and Death process - Birth and Death process with absorbing states Chapter 1 : Section 2 (Poisson process) Chapter 4 : Sections 1, 2 and 4to 7					
		<b>UNIT-IV : Renewal processes</b> : Definition and related concepts – Some special renewal processes Chapter 5 : sections 1 - 3					
		<b>UNIT-V: Brownian Motion</b> : Definition – Joint probabilities for Brownian Motion – Continuity of paths and the maximum variables – Variations and extensions Chapter 1 : Section 2 ( Brownian Motion) Chapter 6 : sections 1 to 4 and 7A only

Title of the Course		<b>4.5.3: PROGRAMMING IN C++ - PRACTICALS</b>					
Paper Number		4.5: Skill Enhancement Course - III					
Category	Elective	Year	<b>II</b>	Credits	<b>2</b>	Course Code	
		Semester	<b>IV</b>				
Instructional Hours per week		Lecture	Tutorial	Lab Practice	Total		
			-	3	<b>3</b>		
Prerequisite		Basic computer skills, mathematical problem solving					
Objectives of the Course		To make the students experts in solving mathematical problems through C++ - programming					

Course Outline	<p>List of Practical's:</p> <ol style="list-style-type: none"> <li>1. Programs to evaluate <math>\sin x</math>, <math>\cos x</math>, <math>e^{-x}</math> to 0.0001% accuracy.</li> <li>2. Program to calculate the variance and standard deviation of a set of numbers.</li> <li>3. Program to find Product of matrices, inverse of a matrix using functions. Macro that obtains largest of three numbers.</li> <li>4. Define a class of students and prepare a statement containing name, total marks of Ranks (using functions).</li> <li>5. Program to check whether a number/ string is a palindrome without using the corresponding standard function.</li> <li>6. Write a program to conversion between polar and rectangle co-ordinates</li> <li>7. Define a class string and exhibit the use of string manipulations.</li> <li>8. Write a program to finding area of 2 different shapes</li> <li>9. Create a class FLOAT that contains one float data. Overload all the four arithmetic.</li> <li>10. Write a C++ program implement a class 'Complex' of complex numbers. The class could be include member functions to add and subtract two complex numbers.</li> <li>11. Write a C ++ program to implement a class for complex numbers with add and multiply as member functions. Overload ++ operator to increment a complex number.</li> <li>12. Write a program in C++ to demonstrate friend function.</li> </ol>

### Course Learning Outcome (for Mapping with POs and PSOs)

PO	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	Mean Score
CO									
CO1	3	-	-	3	-	3	3	3	3
CO2	3	-	3	-	-	3	3	3	3
CO3	3	-	3	-	-	3	3	3	3
CO4	3	-	-	3	-	3	3	3	3
CO5	3	-	-	3	-	3	3	3	3

**SEMESTER-IV--4.6. Extension Activity /Pollution Awareness/Literacy/ Voluntary Services**

Subject Code	Subject Name	Category	L	T	P	O	Credits	Inst. Hours	Marks		
									CIA	External	Total
	<b>4.6. Extension Activity /Pollution Awareness/Literacy/ Voluntary Services</b>	EA	Y	-	-	-	1	-	50	50	100
<b>Learning Objectives</b>											
LO1	Extension activities concentrates on putting across in an understandable manner new ideas and improved technologies of practical utility to the rural, tribal and urban privileged and underprivileged people.										
LO2	Enables students to use the newly acquired knowledge and skills to improve their general standard of living.										
LO3	It is a social science that attempts to adopt various strategies of change in the behaviour patterns of people through technological and scientific innovations for the improvement of their standard of living.										
LO4	The idea behind the extension work is the coming together for the task of social upliftment.										
LO5	Students typically develop leadership and teamwork skills and become more attuned to working amongst populations of varying ethnicity or socio economic status.										

**Course Outcomes**

<b>Course Outcomes</b>	On completion of this course, students will / can;	
<b>CO1</b>	Is a learning-teaching methods connect meaningful community service to academic curricula	PO1, PO8

<b>CO2</b>	Service-learning blends community service goals and formal and informal (standard/academic and experiential/non-standard) educational goals in a manner that benefits participants and recipients.	PO1, PO2
<b>CO3</b>	Extension activities and learning is a set of techniques and tools that can strengthen community relationships and connections.	PO5, PO3
<b>CO4</b>	Extension contributes to national development programmers.	PO4, PO6
<b>CO5</b>	It enhances leadership and team work qualities among the students	PO6, PO4

### Methods of Evaluation

<b>Internal Evaluation</b>	Continuous Performance Assessment and Viva Voce	50 Marks
<b>External Evaluation</b>	Extension Activity Report	50 Marks
	Total	100 Marks

### Methods of Assessment

<b>Recall (K1)</b>	Simple definitions, MCQ, Recall steps, Concept definitions
<b>Understand/Comprehend (K2)</b>	MCQ, True/False, Short essays, Concept explanations, short summary or overview
<b>Application (K3)</b>	Suggest idea/concept with examples, suggest formulae, solve problems, Observe, Explain
<b>Analyze (K4)</b>	Problem-solving questions, finish a procedure in many steps, Differentiate between various ideas, Map knowledge
<b>Evaluate (K5)</b>	Longer essay/ Evaluation essay, Critique or justify with pros and cons
<b>Create (K6)</b>	Check knowledge in specific or offbeat situations, Discussion, Debating or Presentations

### Mapping with Programme Outcomes:

	PO 1	PO 2	PO 3	PO 4	PO 5	PO 6	PO 7	PO 8	PO 9	PO 10
<b>CO 1</b>	3	3	3	3	2	3	2	3	3	3
<b>CO 2</b>	3	3	3	3	3	3	3	3	3	3
<b>CO 3</b>	3	3	3	1	2	3	3	3	3	3
<b>CO 4</b>	3	3	3	3	2	3	3	3	3	3
<b>CO 5</b>	3	3	3	3	2	3	3	3	3	3

### CO-PO-PSO Mapping

	PO 1	PO 2	PO 3	PO 4	PO 5	PSO 1	PSO 2	PSO 3	PSO 4	PSO 5
CO 1	3	3	3	3	2	2	2	3	2	3
CO 2	3	3	3	3	3	3	3	3	3	3
CO 3	3	2	3	3	2	2	3	3	3	3
CO 4	3	3	3	3	3	2	3	3	3	3
CO 5	3	3	3	3	3	2	2	3	2	3
<b>S-Strong(3) M-Medium (2) L-Low (1)</b>
